The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 1-5 are rejected under 35 U.S.C. 103(a) as being unpatentable over Hwang et al '363 (newly cited). Hwang et al '363 discloses a process for producing hydrogen comprising introducing a preheated stream of hydrocarbon, water and air to an autothermal reactor containing a layered catalyst. (See the Abstract.) Hwang et al '363 teaches at col. 5, line 47 to col. 6, line 36 that the catalyst layer may comprise rhodium and a rare earth oxide on an aluminum oxide support. The difference between the process disclosed by Hwang et al '363, and that recited in applicants' claims, is that Hwang et al '363 does not disclose the specific amounts and ratios of the elements as recited in applicants' claims. It would be prima facie obvious to employ the amount and ratios of the elements as recited in applicants' claims in the catalyst layer, since it would be within the skill of one of ordinary skill in the art to determine suitable or optimum amounts and ratios of the catalytic elements. It would be expected that such amounts and ratios would be result-effective variables for the process of Hwang et al '363.

The Anzai Declaration has been considered, but is not convincing of error in the rejection over Hwang et al '363. The Declaration provides evidence that catalysts exhibiting excellent properties in steam reforming do not necessarily exhibit excellent properties in autothermal reforming. However the steam reforming catalyst layer of

Hwang et al '363 is present in the autothermal reforming section, and is thus considered to constitute an autothermal reforming catalyst.

Prasad et al is made of record for disclosing an autothermal reactor including a combustion section and a catalytic reforming section at col. 6, lines 30-41.
